

GB HabiStat Crested Gecko Accessory Kit – Detailed Setup Instructions

Caution: Do not connect any electrical equipment to the main until the set up has been completed

Tank Placement: Ensure the tank is kept away from any heat source or windows within the home as incorrect placement can cause temperature fluctuations. Refer to instructions enclosed in the tank on how to build.

HabiStat Dimming Thermostat: Place the Thermostat probe in the basking area at the top of the enclosure, preventing obstructions to provide accurate readings. Set the temperate to 27°C (80.6°F) by turning the dial on the Thermostat unit. Refer to product instructions for installation advice.

Arcadia Pro T5 UVB Kit: Insert the ShadeDweller bulb into the unit and position towards the front of the enclosure, ensure placement is not blocking any heat or light from the Clamp Lamp. Refer to individual instructions for installation advice.

Arcadia Clamp Lamp and HabiStat Bulb: Install bulb into Clamp Lamp. Secure the Clamp Lamp by clamping to the rear of the tank with the dome directing into the enclosure. Refer to individual instructions for installation advice.

Digital Compact Thermometer: Place the Thermometer probe within the basking area of the enclosure alongside the Thermostat probe. This will give you an accurate reading in the required area.

Dial Hygrometer: Place the Hygrometer centrally on a side wall to provide an accurate humidity reading for the enclosure.

You are now ready to connect the electrical equipment.

HabiStat Coir Block & Moss: The Coir Block is supplied compressed. Place the Block into a suitable container and add 3 litres of warm water and allow to expand for roughly 1 hour. Once complete mix in the Moss to achieve desired texture. Evenly distribute into the base of the enclosure. Make sure the enclosure doors are closed for this next step.

Temperature Check: Ensure all doors are closed for a minimum of 30 minutes for the enclosure to heat up before monitoring. The basking area should be between 26-28°C (78.8-82.4°F). Adjust the dial on the Thermostat accordingly if these parameters are not being achieved. Continue to monitor over the next few hours. Please note opening the doors will affect the temperature.

HabiStat Natural Calcium & Repton: Use the supplements when dusting insects for consumption.

HabiStat Insecta Snack: Use as a livefood supplement to add nutritional value.

HabiStat Crested Gecko Diet: A powder mix which contains real fruit along with 9 key protein sources. Refer to mixing instructions on packaging. **HabiStat Spray Bottle:** Use regularly with fresh water to maintain humidity levels of 50-80%. Spray directly onto bedding to keep damp and providing droplets on plants.

HabiStat Bactericidal Cleaner: Use to disinfect décor along with maintenance of the enclosure.

HabiStat Feeding Ledge: Fasten securely using the suckers to a clean dry surface in the top third of your enclosure.
